Importance: High

Chris,

See USE sampling requirements I highlighted below. We stated in the RFQ (attached last paragraph in Section 1) that we would do sampling every 275 tons (WM requirement). There is also a following email from USE that states we do not have to do PCB testing because we are calling it a TSCA waste. I will forward you that email.

Hopefully the 2 composite samples we are testing will cover us to 1000 tons.

Hello,

Please see the revised Attachment A in regards to the bid documents submitted this morning. The change had to do with the incorporation of the EPA's e-Manifest fee/load into the line items of "Transportation." Thanks very much.

In regards to Bid Item 8 and TSDF testing parameters, please note that you already mentioned you would be performing full TCLP to determine that this waste, after treatment, is not a RCRA waste. Therefore, no additional testing (besides full TCLP and Total PCBs) has to be submitted for our approval process. Also, we require usually, by nature of the project and Constituents of Concern present, that this representative analytical be presented to us for **every 500 tons of material**.

If you have any questions or want to discuss the information above, please do not hesitate to call. I will be traveling to New England for the next 3 days this week for Sales meetings and such, so I will try my best to answer your calls. I will also be checking e-mails regularly. Thanks again for your consideration of US Ecology for assisting with this project.
